CLAW · DISTILL · HAGGLE

⚡ Reflex

The agent that finds your one winning product

An arbitrage dropship recommender — it watches what you search for, hunts the price gap between local sourcing and EU prices, and negotiates the deal.

NVIDIA Claw Agent Challenge · Barcelona

THE PROBLEM

Sellers drown in products.
Generic AI doesn't know your taste.

Thousands of products launch daily. Big sellers hire buyers to sift them.

Independent sellers scroll at midnight, alone. And every AI judge gives the same generic answer to everyone — because it never learned **what *you* would buy**.

THE INSIGHT

Don't triage 2,000 products. Find the one with the gap.

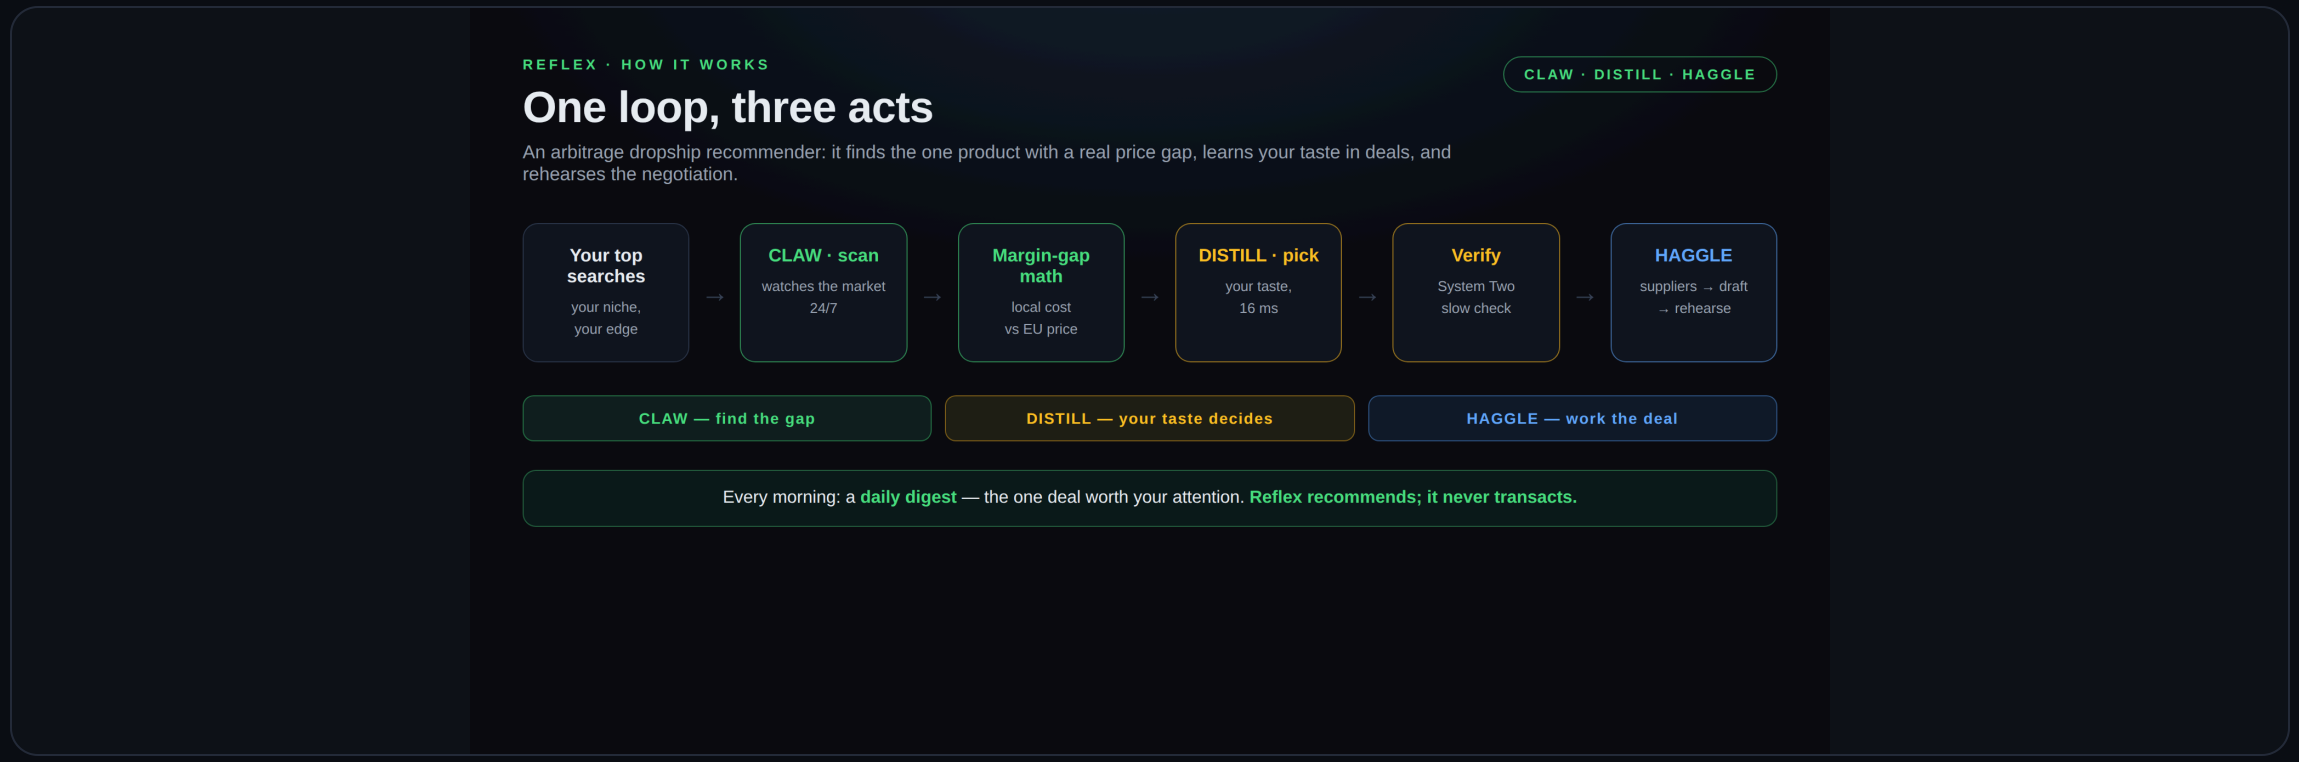

> *The same leather tote: **$12** to source locally, **€45** in the EU.*
>
> *That gap is a business — if you find it first.*

Reflex starts from **your top searches** — your niche, your edge — and hunts the single best risk-adjusted arbitrage.

ACT I · CLAW

Find the gap

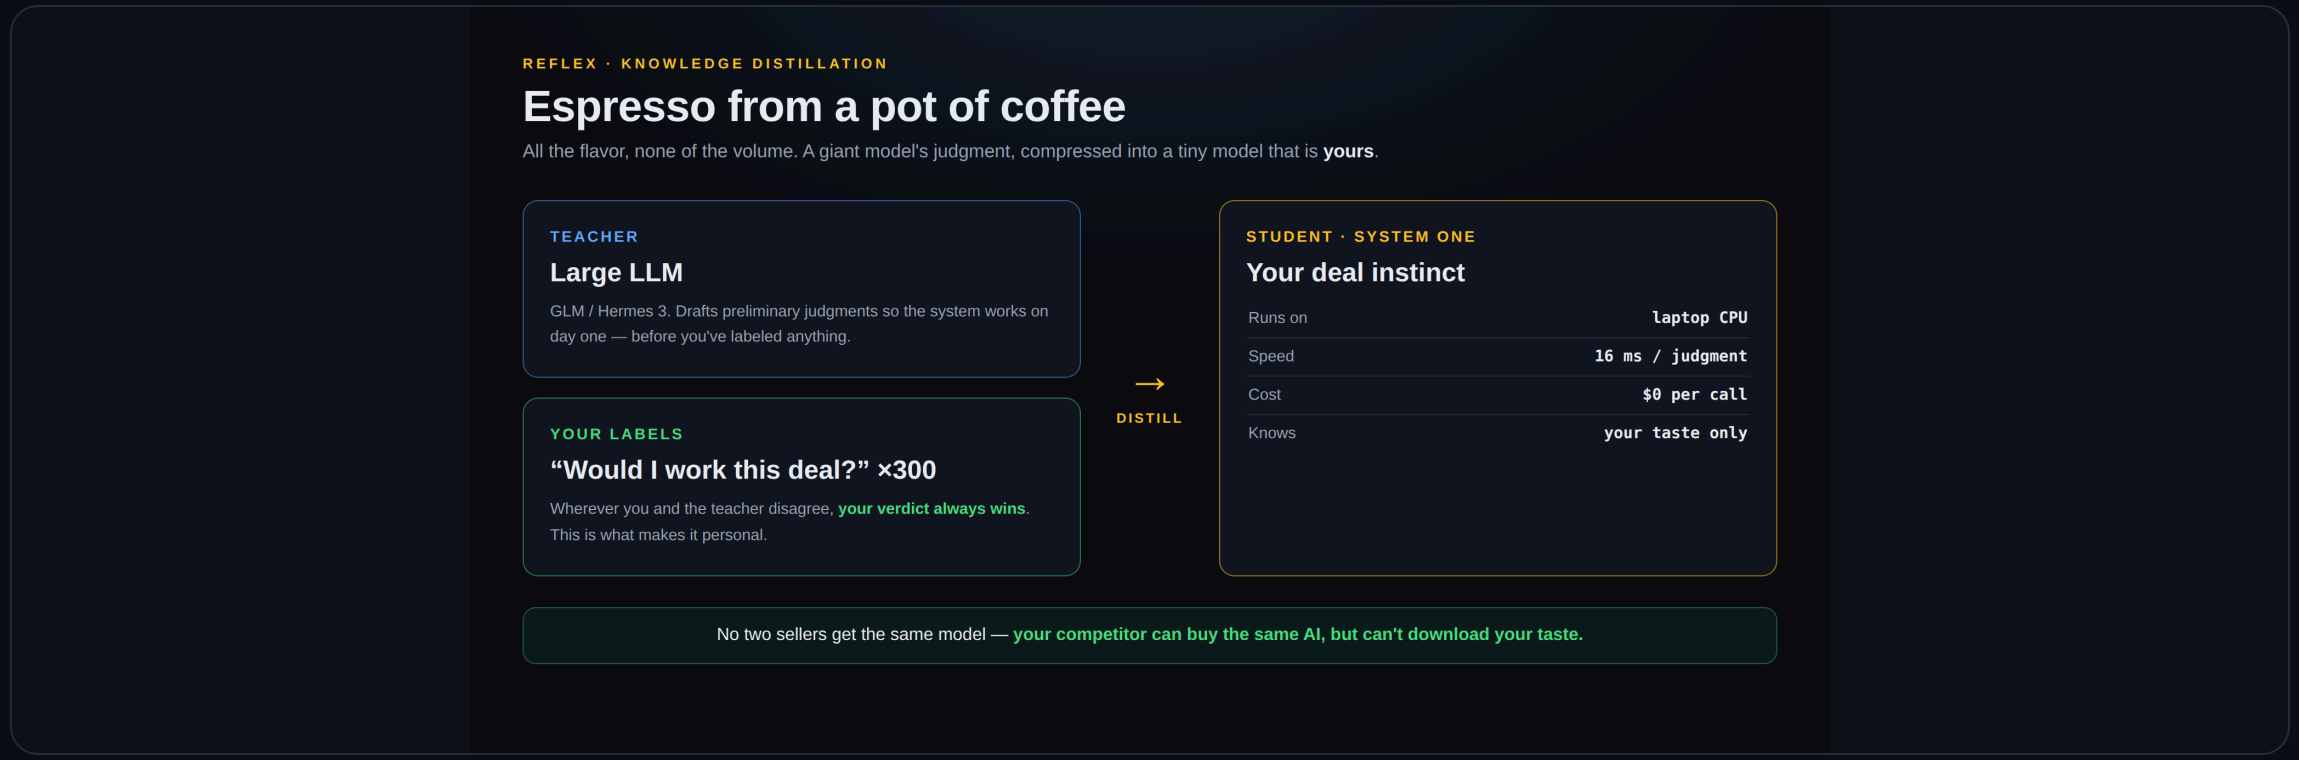

The claw watches the market **24/7**: fresh candidates in, margin-gap math on every one — local cost vs EU price.

ACT II · DISTILL

Your taste, compressed

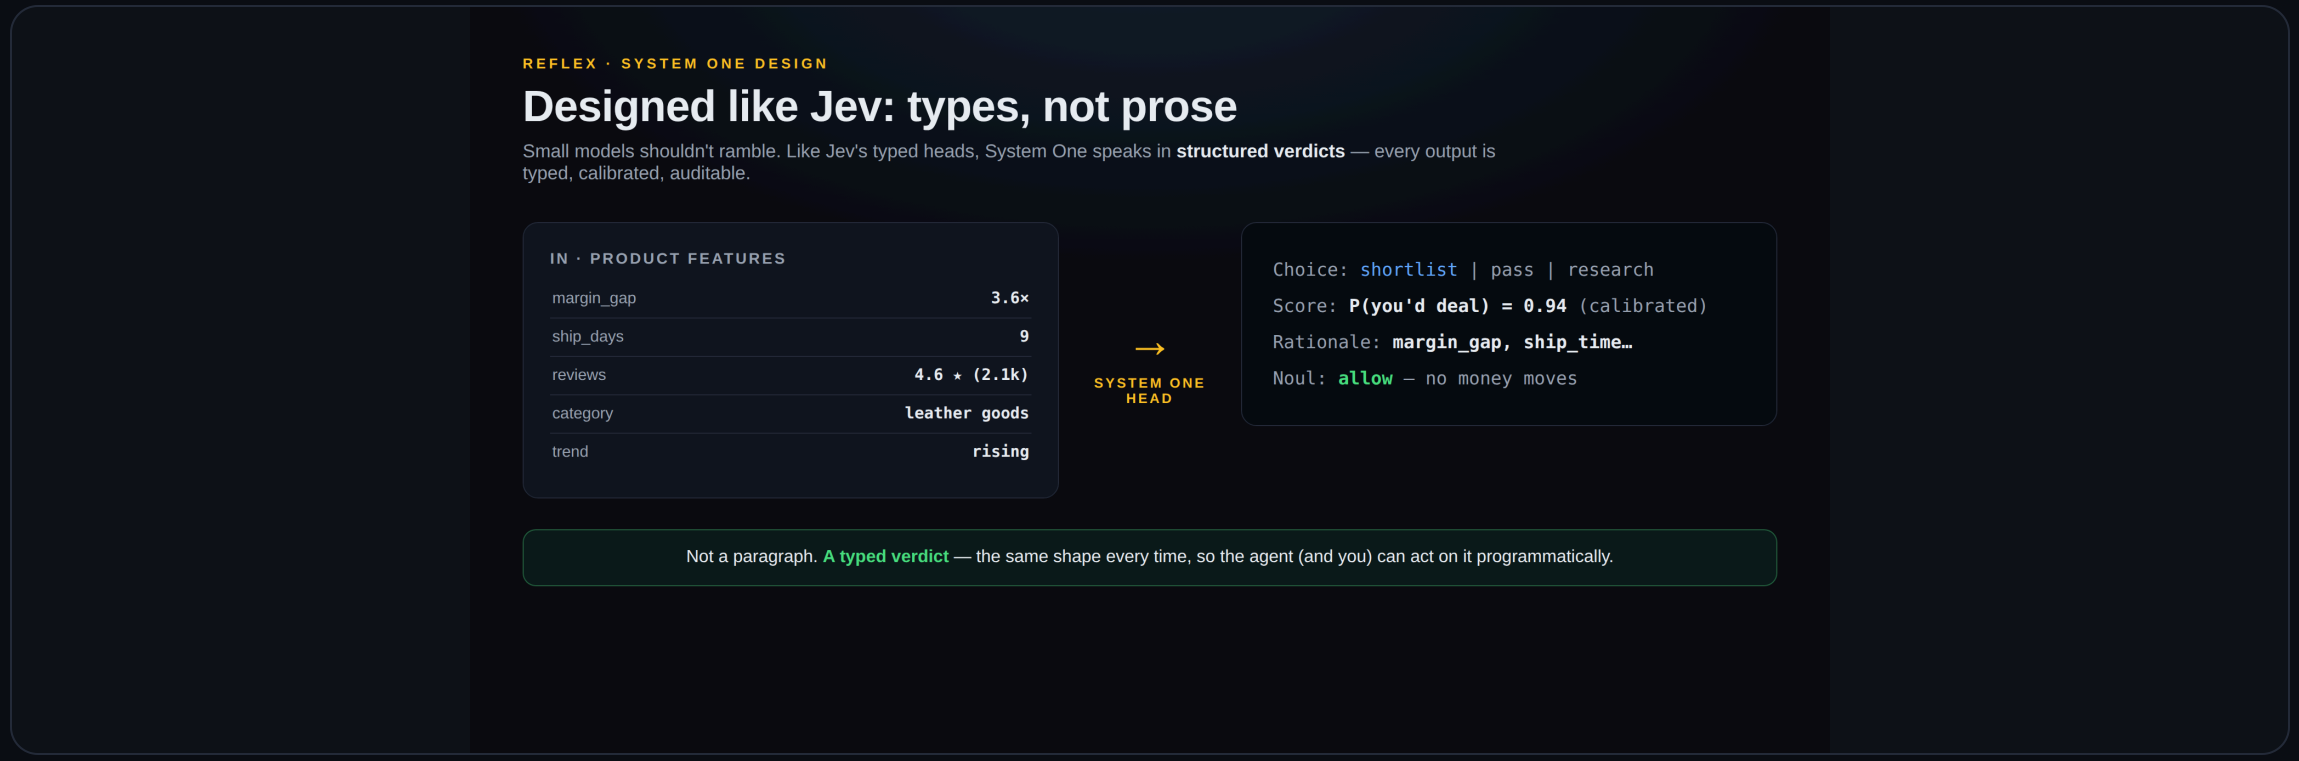

Espresso from a pot of coffee. A giant teacher model + **your** "would I work this deal?" labels → a tiny System One head. Your labels always beat the teacher's.

SYSTEM ONE · DESIGNED LIKE JEV

Types, not prose

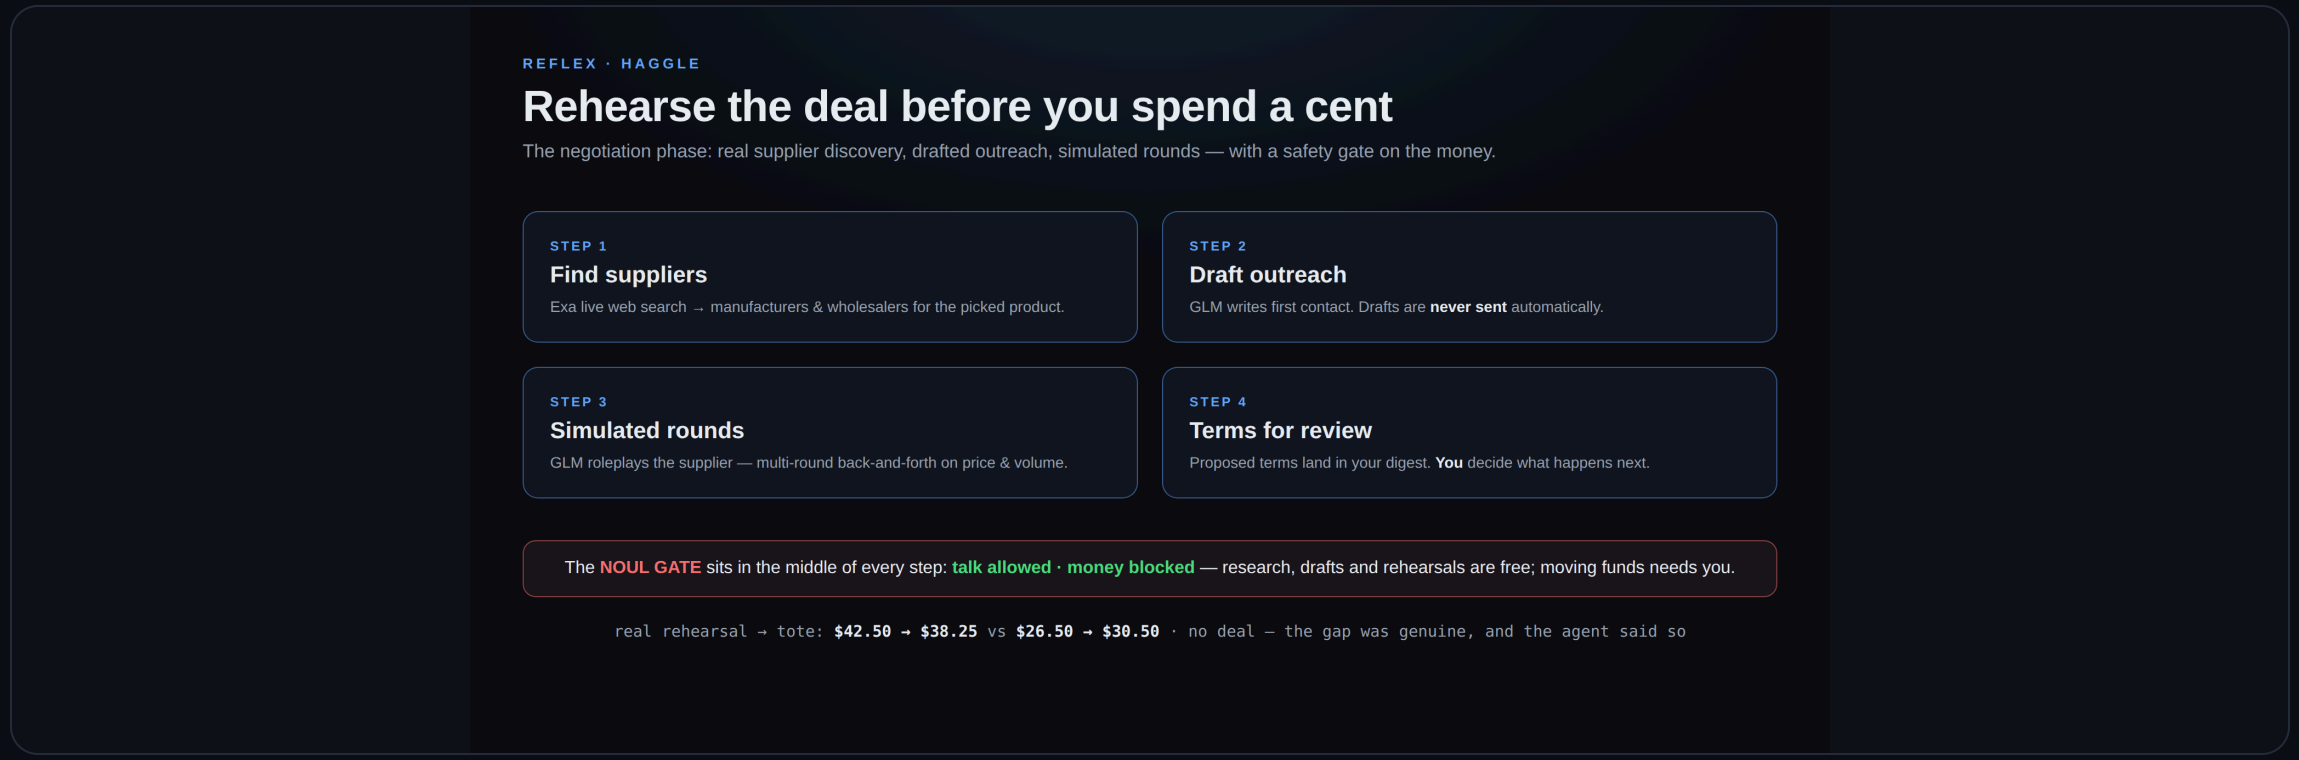

Small models shouldn't ramble. Like Jev's typed heads, every verdict is **structured**: `shortlist / pass / research` + calibrated score + rationale — in **16 ms**, for **$0**.

ACT III · HAGGLE

Rehearse before you spend

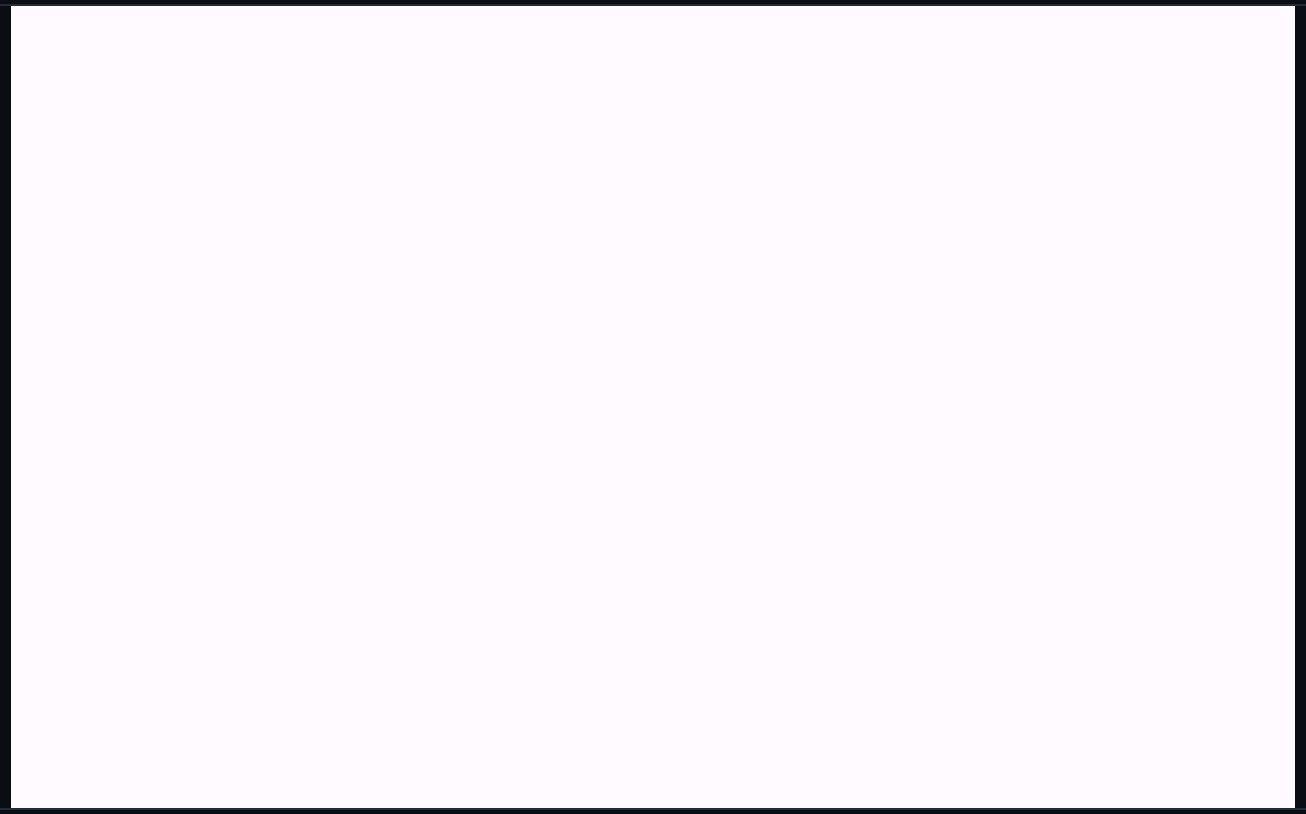

Real supplier discovery, drafted outreach, **simulated** negotiation rounds — with the **Noul gate** on the money: talk allowed, money blocked.

PROOF · REAL RUN

Watch it work

The live dashboard: triage cycle on **v2 ID→EU pairs**, then a simulated negotiation — $16.00 → $15.29, deal at 500 units. (Offline demo recording.)

NUMBERS

Verified, not vibes

0.91	16ms	97%	9/9
accuracy, held-out deals	per judgment, System One	decided with zero LLM calls	tests green

Two-speed thinking: the **fast gut** screens thousands of candidates free — only the uncertain ~3% escalate to the **slow brain**.

SAFETY

Noul: recommends, never transacts

The agent can **research, draft, and negotiate** — but it can **never move money** or commit funds without you. Verified live: `"place an order" → BLOCKED`, `"draft outreach" → ALLOWED`.

WHY IT WINS

Four moats

- ✓ **Personal, not generic** — no two sellers get the same model; competitors can't download your taste
- ✓ **Long-running** — watches the market 24/7, digests daily, no babysitting (the challenge's real constraint)
- ✓ **Novel** — no published personal on-device decision model trained on one user's history
- ✓ **Honest economics** — 97% of decisions free; the expensive brain only verifies the one
